

# Changelog

- 1- 27/6/2016 - Missing file 'SPConfig.h' was added
- 2- 17/7/2016 - Makefile, SPConfig.h and instruction file
  - a. Makefile:
    - i. The makefile was changed (make sure you have the updated version)
  - b. SPConfig.h
    - i. Minor changes to some function names was made
    - ii. Documentation of spConfigGetPCAPath
  - c. SPIImageProc.cpp
    - i. Missing free in **sp: : ImageProc: : getImageFeatures**
  - d. Init.sh:
    - i. A script that initializes opencv on Nova Shell (See assignment 2)
  - e. **Configuration file instructions:** refer to the subsection command line arguments:
    - i. The user may enter the configuration file either by using the default configuration file or by using a command line argument to do so. **Please refer to the section "Configuration -> Command line Argument**
  - f. **KDTree construction:** a mistake in the example of KDArrary split was fixed
- 3- 17/8/2016 - Instruction file changed
  - a. In order to terminate the program properly a new subsection (**Exiting**) was add to the section **Query**. Refer to page 8 in the instruction file
  - b. A new note was added to the search process on page 14. Please make sure to go through this (it is crucial for the correctness of the search)
  - c. Minor changes to SPIImageProc.cpp, SPIImageProc.h was made. This should be transparent to you, thus if you replace these files you should get no errors.
